The diagram below shows how tool is used. Assumption is that you have more than one digital cameras and/or computers. Perhaps belonging to family members. With PhotoCon tool each camera/computer holder can just copy images to PhotoCon (client) directory and then PhotoCon automatically sends images to PhotoCon Server where images are consolidated to PhotoCon Server directory. Images are also ordered by year, month, date and time.

After the consolidation, any gallery software, such as Google Picasa , can be used to view ordered images from the PhotoCon server directory.

This product is part of Open Product Development. The first version (1.0.0) of this product was developed internally. Future versions will have features that users want.
